1 How to Use

At each stage of the İzmir University of Economics Syllabus Management System application, you may exit by pressing the 'X' button in the top right corner. Additionally, you can minimize the application by pressing the '-' key or adjusting the screen size to full screen or small screen using the center button. Upon opening the application, you will be presented with three distinct options.

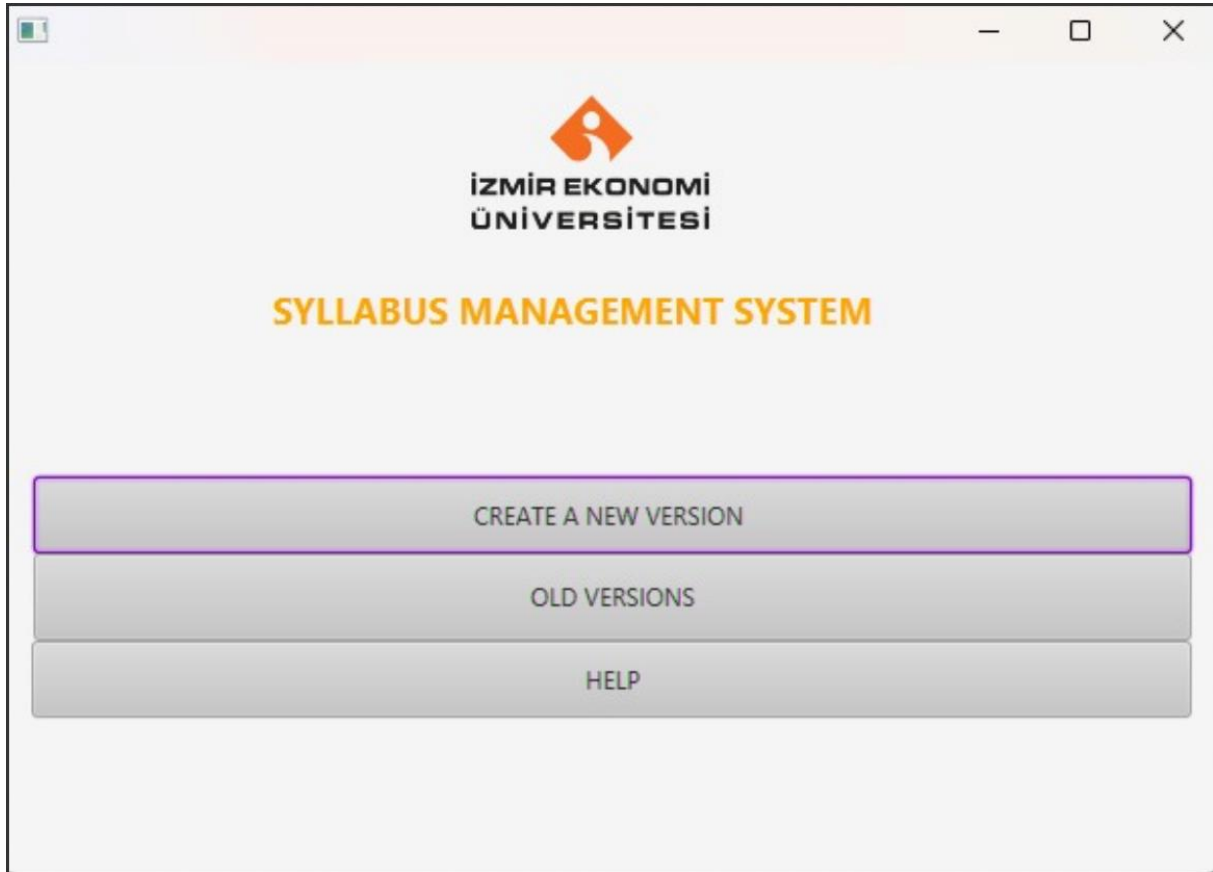

Figure 1. Main Screen of Management System

1.1 Create New Version

When you click the button, a page consisting of a total of seven tabs will appear, allowing you to enter all the information for the course you want to add or update. The first six tabs are for collecting information about the course you want to add, while the last tab, labeled 'Save Tab,' includes a section prompting you to enter details about any changes if it is a newly added version. This section will also request the date and time of the change or record.

In addition, you can switch between languages using the TR-ENG buttons in the top right corner of the screen.

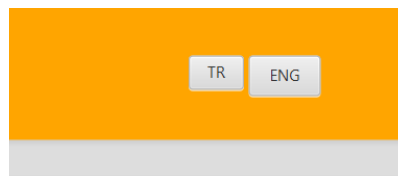

Figure 2. Language Change Button

The 'Old Version' button located in the top left corner allows you to view a screen displaying the old versions of the course. Additionally, you can return to the main menu by pressing the 'Back To Main Menu' button.

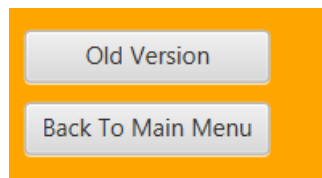

Figure 3. Old Version & Back To Main Menu

1.2 Old Version

Within the 'Old Versions,' you can view the courses registered in the program. When you first open the screen, you will encounter a blank page (figure 4). To view the entered records, simply click once on the button labeled 'Lecture' (figure 5). Subsequently, you will be presented with all the courses recorded up to that point (figure 6).

Figure 6. Old Version List of Old Version Tab

To specifically search for a particular course, you need to use the 'Look For' button. After selecting the desired course from the 'Lecture' section, simply press the 'Look For' button.
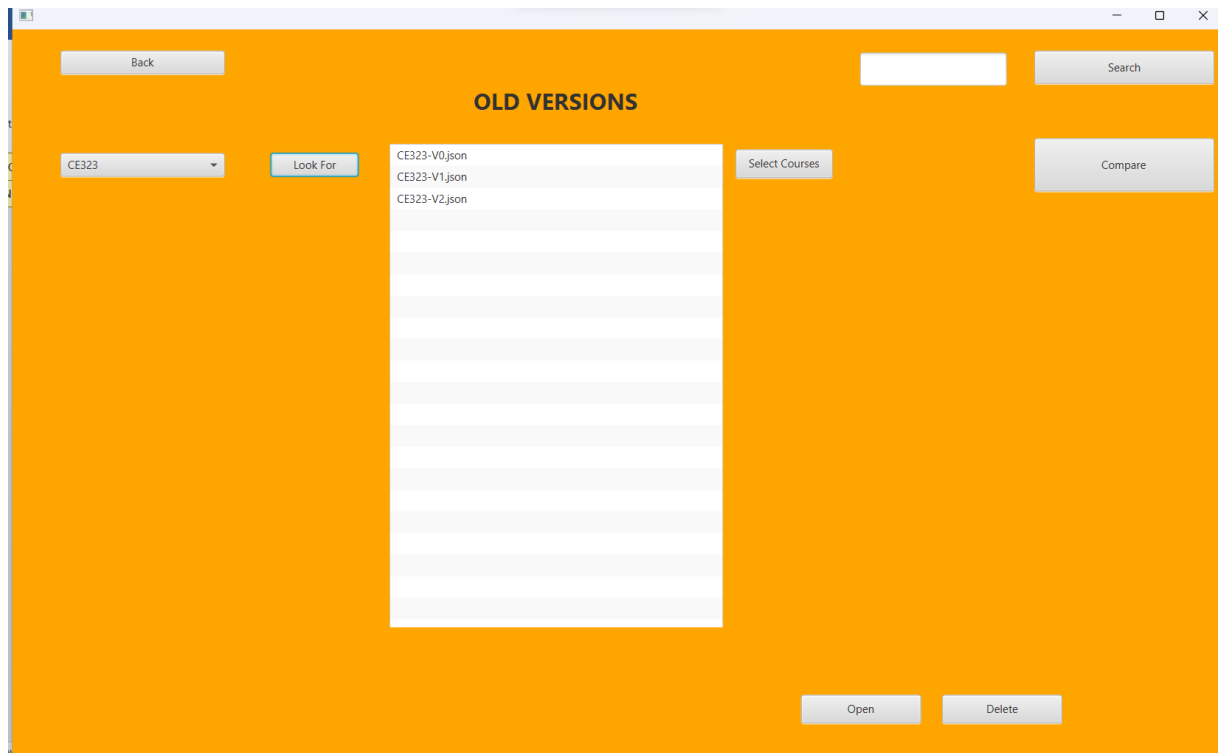

Figure 7. Old Version Tab

If you wish to make a comparison between two courses, you need to click on the desired courses and then click 'Select Course.' After that, you can view the selected courses next to the 'Compare' button (Figure 8)

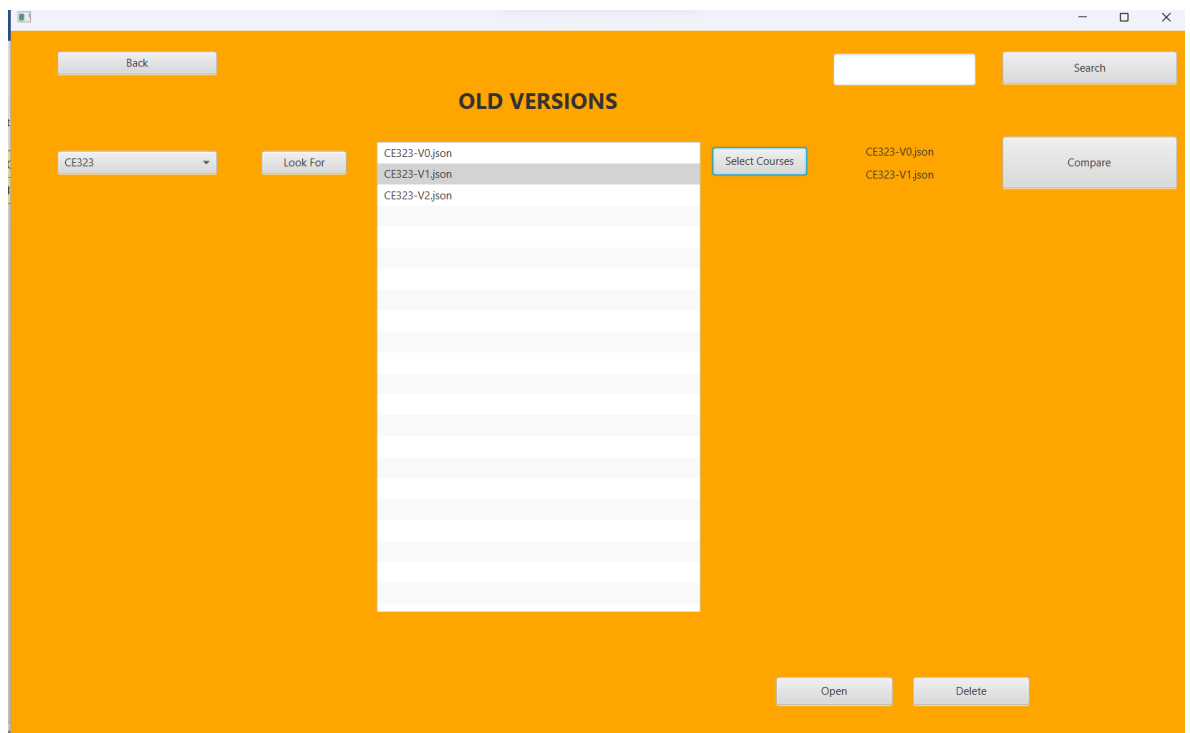

Figure 8. Old Version Tab

After completing your selections, you can transition to the 'Compare' page by clicking the 'Compare' button. More detailed information about the document will be provided in the section that explains the 'Compare' button.

To use the search feature, simply type the course you want to search for in the white box located in the top right corner of the same screen. Afterward, clicking the 'Search' button will suffice

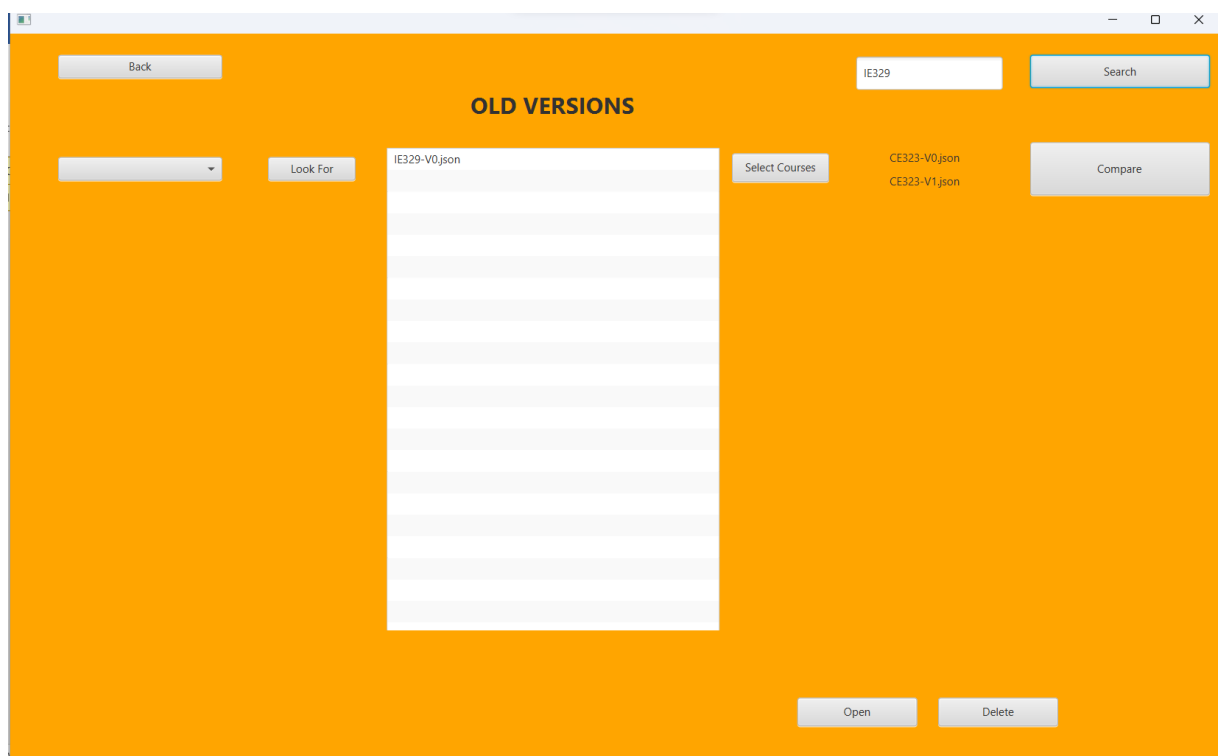

Figure 9. Old Version Tab

Similarly, using the 'Open' and 'Delete' buttons (Bottom Right Corner), you can either delete the selected course or open it to view.

1.3 Compare

In this part of the program, after selecting the courses via "Select Course" (Figure 10) as explained above, you can view the changes made in each tab by pressing the "Compare" button. In the opening tab user could see the compared features of two version.

1.4 Help

By clicking the 'Help' button, you can open the document you are currently reading.

2   Important Issues

- JavaFX applications created in **Java 11** and later are no longer a standard part of the JDK and require additional dependencies. Therefore, specific JAR files, such as those for JavaFX applications, may not function as expected when opened with a simple double-click. In such cases, running the application from the command line is often more effective. The JAR file created for our application can be executed through the command window using the **appropriate command**.
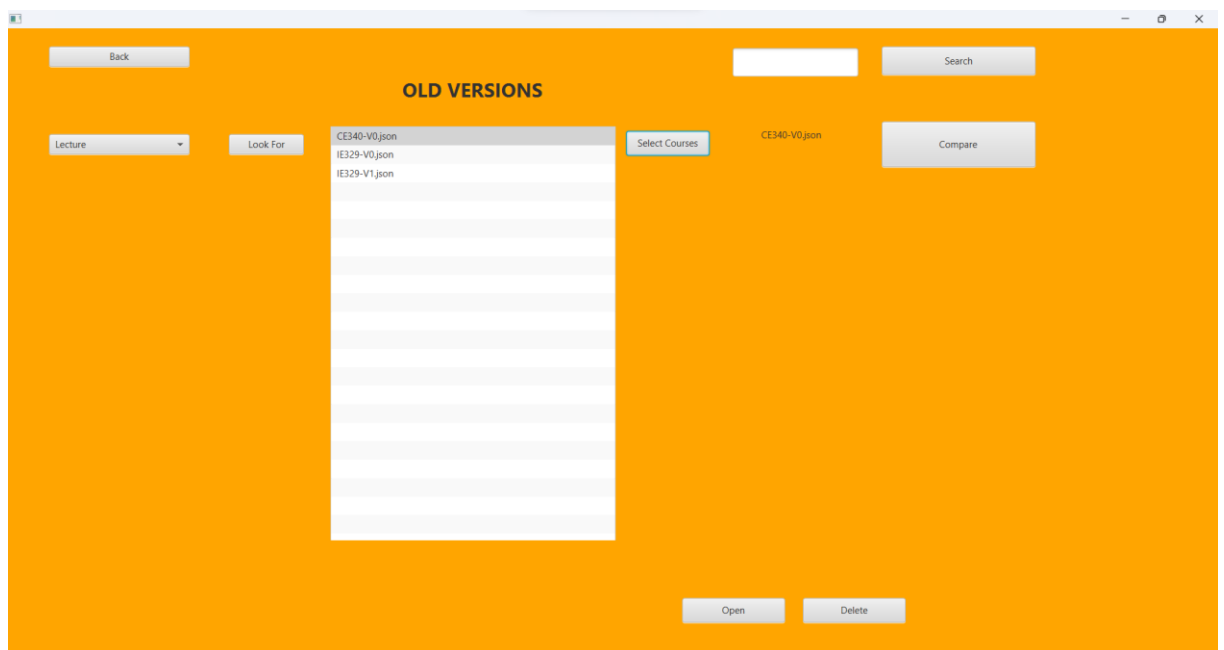

- Second Tab

Figure 11. Old Version Screen

When the user enter the "Old Version Tab" if he/she click "Open" button automatically new tab opened. After that, he/she can use the application in both tabs.
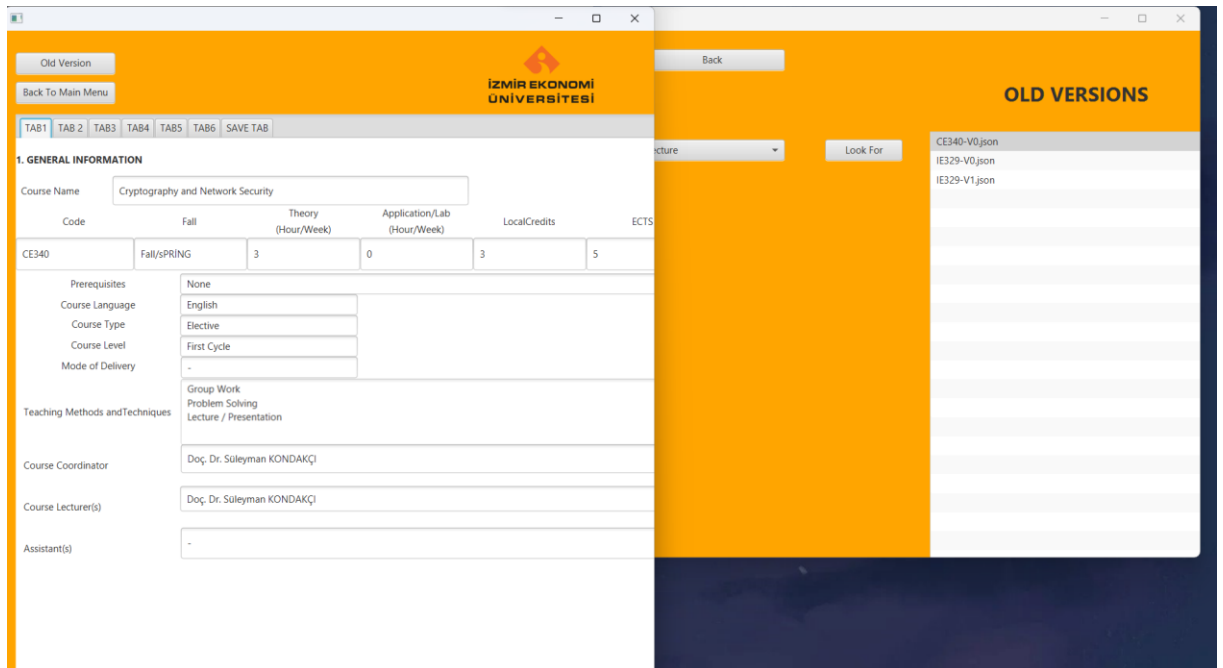

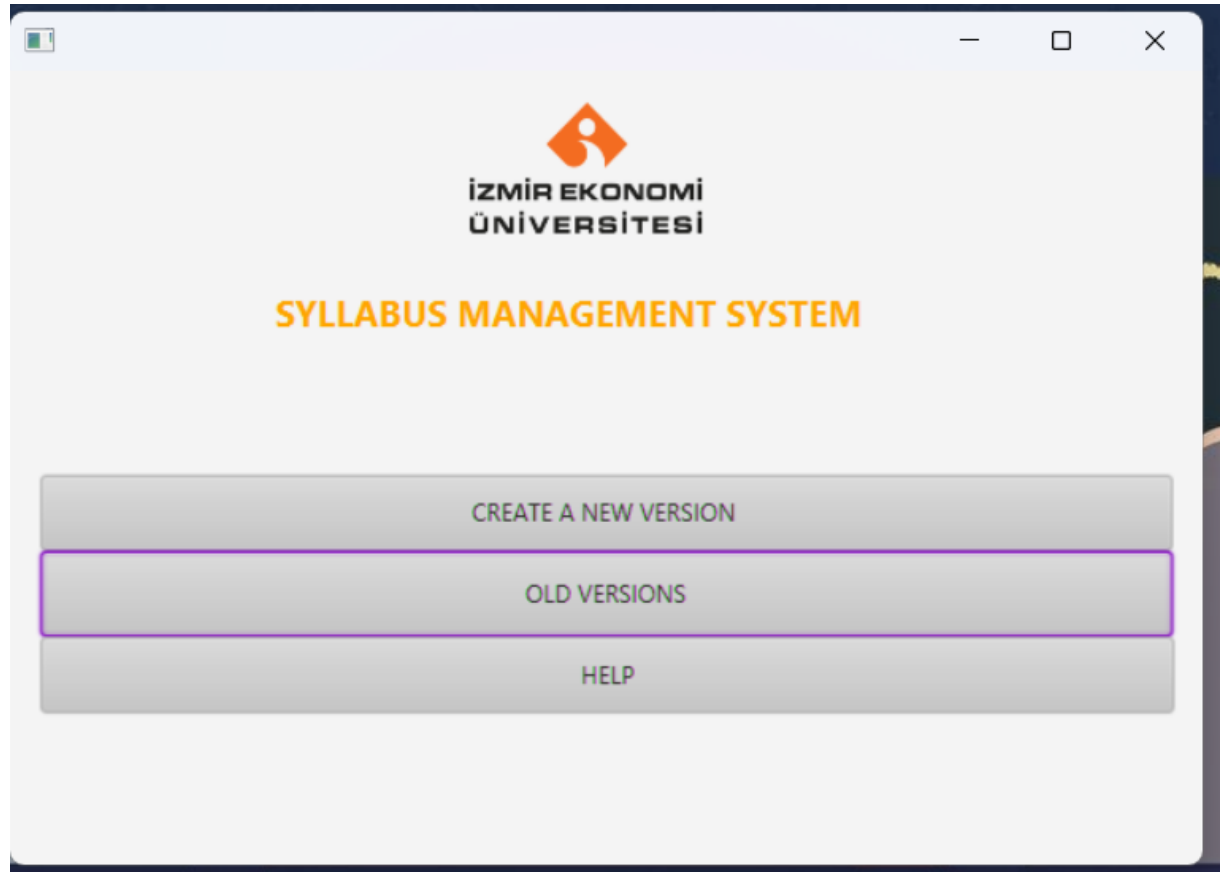

Figure 12. Both Tab Screen

- When the user wants to change the version, he can use the "Open" button to overwrite the old data and then save it. There is no need to refill everything. Step by step explanation with visuals:

1.

2.

CE340-V0.json
CE340-V1.json
IE329-V0.json
IE329-V1.json

3.

Open

4.

5.

When user click the "Save All" button, new version will be created.
